LEDsmart+™
Rotary Dimmer with built in on / off switch and multi-way control

- Suitable for one-way, two-way, three-way and multi-way dimming
- MultiMate™ technology allows multi-way dimming / switching with no extra wires
- Suitable for both retrofit and new installations
- Programmable minimum level, maximum level, kick-start, off state indicator and more
- Active only ‘two wire’ connection - no neutral required
- No separate switch required - built in switch
- ‘Quick flick’ dim to maximum or minimum dimming level
- Illuminated halo with interchangeable coloured rings (blue/green/orange/clear)
- Dim to OFF with most LED light sources
- Kid’s bedroom mode – double tap when on to dim down over 30 minutes
- Wake up mode – double tap when off to dim up over 30 minutes
- Selectable fall-back LED Indicator level
- 1W minimum load
Product Item

This guide provides installation, setup and specification information for the LEDsmart™ Rotary Dimmer/Switch, item number MMDM/RT.

Product summary and capabilities

Designed in Australia to provide optimised dimming of LED based lamps and drivers, this high quality, two-wire phase control dimmer can be connected in parallel to other LEDsmart™ devices to provide a simple solution to multi-way control.

Although optimised for LED lighting loads, the dimmer also provides excellent compatibility with other common lamp types such as incandescent lamps, 12V halogen (dichroic) lamps and dimmable CFL’s.

Programmable setup functions

<table>
<thead>
<tr>
<th>Setup functions</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum Brightness</td>
<td>If an LED or CFL lamp becomes unstable at low dimming levels, it can flicker or pulse on/off. The dimmer’s minimum brightness can be set to a level above the point at which a lamp flickers/pulses</td>
</tr>
<tr>
<td>Maximum Brightness</td>
<td>The maximum brightness level provided by the dimmer can be set to suit customer requirements</td>
</tr>
<tr>
<td>Kick Start</td>
<td>This function is only required when dimming some LED and CFL lamp’s. To ensure these lamps switch on, they require the dimmer output to be set to 50% for 0.2 of a second when the lamp is turned on. Default: The Kick Start feature is switched off</td>
</tr>
<tr>
<td>LED indicators</td>
<td>The dimmer’s white LED indicators can be set to glow on or turn off when the dimmer is switched off</td>
</tr>
<tr>
<td></td>
<td>Default: The white LED indicators are set to glow on when the dimmer is turned off</td>
</tr>
<tr>
<td>Separate Switch Mode*</td>
<td>Some lamps, such as non-dimmable CFL’s, can flicker when switched OFF using the dimmer’s integrated switch. In these cases, the dimmer can be used in ‘Separate Switch Mode’ and combined with a separate mechanical switch Default: Separate Switch Mode is switched off</td>
</tr>
<tr>
<td>Toggle / Memory Dimmer</td>
<td>The dimmer has the option to turn on at the brightness level set when the lights were turned off (memory dimmer), or to turn on at the maximum brightness level (toggle dimmer). Default: the dimmer is setup as a toggle dimmer</td>
</tr>
<tr>
<td>MultiMate™ ON/OFF</td>
<td>MultiMate™ functions can be switched ON or OFF                                                                                                                                         Default: MultiMate™ features are switched on</td>
</tr>
</tbody>
</table>

* Note: Separate Switch Mode is suitable for single LEDsmart™ installations only. For multi-way installations, see the note below.

There are a wide range of LED and CFL lamps available from different manufacturers. The following issues are occasionally seen when used in conjunction with 2-wire dimmer/timer/switch products.

- When switched off, the LED/CFL lights flicker, pulse on/off or do not switch off completely
- When switched off, the LEDsmart™ LED indicators flicker
- When switching on, the LED/CFL lights have difficulty switch on and the dimmer indicators flicker or pulse

It is recommended to install a Diginet ‘Load by-pass’ device (Diginet item number MMBP) across Load and Neutral terminals to provide improved performance of these lamps.
**Multimate™ technology**

Multimate™ is a technology inside Diginet’s range of high quality LEDsmart+ dimmers, timers and electronic light switches. It allows multi-way control of lighting without the need for an expensive control system. Multimate™ technology is suitable for both new and retrofit installations.

Multimate™ technology enables multiple LEDsmart+ two-wire devices to be wired in parallel when two-way, three-way or multi-way dimming and switching is required. When connected in parallel LEDsmart+ dimmers allow dimming (and switching) of connected lighting loads from multiple locations without any additional wiring. No strapper wires, dedicated remote switch wiring or ‘control bus’ is required.

Multimate™ is a patented technology, developed in Australia by Gerard Lighting.

The wiring example below shows three LEDsmart+ dimmers connected in parallel to provide three-way dimming and switching of four downlights without any additional wiring.

---

**Products with Multimate™ technology included**

The following products all include Multimate™ technology and can therefore be connected in parallel to allow multi-way control. Note that different types of Multimate™ products can be connected in parallel. For example, switches and dimmers can be connected in parallel to control the same group of lights from different locations and/or provide additional functionality.

**WARNING – This product must be installed by a suitably qualified installer**
Electric shock may result in serious injury or death. Follow all warnings in this guide and on the product while working in accordance with the latest electrical safety practices for mains-powered electrical equipment.

The terminal block included with the dimmer should be used to carry out the electrical connections, as shown below:

- **Unswitched Active from circuit breaker**
- **Switched Active to lighting load**
- **2-wire dimmer connections**

Once the connections have been made, the terminal cover is closed to ensure the screw terminals are not exposed.

Close cover and push to click in place.

The terminal block can then be cable-tied to the rear of the dimmer housing utilising the two loop holes.

Cable-ties used to attach the terminal block to the rear of the housing.
Wiring for one-way dimming and switching

The dimmer has a built in push on / push off switch as well as a rotary dimmer. Therefore, to provide both dimming and on/off control, no separate switch is required.

New Installation – one-way dimming and switching

[Diagram showing wiring for new installation]

Replacing existing one-way switch with one-way switching/dimming

Existing one-way switching

[Diagram showing existing one-way switching]

Replacement one way dimming/switching

[Diagram showing replacement one way dimming/switching]
Wiring for two-way dimming and switching

To achieve two-way dimming and switching using LEDsmart™ dimmers, the two dimmers are connected in parallel. Note that the dimmers have an integrated switch, therefore no separate switches or additional strappers are required for two-way on/off control.

New Installation – two-way dimming and switching

Two-way dimming and switching using LEDsmart™ dimmers. Note the two-wire dimmers are simply wired in parallel.

Replacing existing two-way switching with two-way dimming/switching

When replacing existing two-way switching with two-way dimming/switching using LEDsmart™, the existing two-way ‘strapper’ wires can be re-used. No new wiring is required. See the wiring diagrams below.

Existing two-way switching

Traditional two-way switching using standard rocker switch mechanisms and strappers between the switches.

Replacement two-way dimming/switching

Rocker switches replaced with LEDsmart™ dimmers using the existing strapper wires. No new wiring required.
Wiring for multi-way (three-way or more) dimming and switching

To achieve multi-way dimming and switching using LEDsmart+ dimmers, the required number of dimmers can be connected in parallel. Note that each LEDsmart+ dimmer has an integrated switch, therefore no separate switches or additional strappers are required to provide multi-way dimming and on/off control.

The diagram below shows the required wiring for three-way dimming and switching using LEDsmart+ dimmers. If more than three-way control is required, further LEDsmart+ devices are simply wired in parallel.

New Installation – multi-way (three-way or more) dimming/switching

Replacing existing multi-way switching with multi-way dimming and switching

Existing three-way switching

Traditional three-way switching using two rocker switches and one intermediate switch, with strappers between the switches.

Replacement three-way dimming/switching

Rocker switches and intermediate switch replaced with LEDsmart+ dimmers. The existing strappers are used to connect the dimmers in parallel. No new wiring is required.
Rotary / Push Dials

Two different sizes of rotary/push dials are included. Either can be used depending on customer preferences. In general, the dials are used as follows.

<table>
<thead>
<tr>
<th>Type</th>
<th>Best Suits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Smaller rotary dial</td>
<td>Wall plates with 2 or more gangs</td>
</tr>
<tr>
<td>Larger rotary dial</td>
<td>1-gang wall plates</td>
</tr>
</tbody>
</table>

Coloured Indicator Rings

Out of the box, the large and small rotary/push dials are fitted with a clear silicon indicator ring. As the dimmer LED indicator is white, the clear silicon indicator ring provides a soft white glow when on.

Blue, green and orange silicon rings are also included with the dimmer. These can be used to match customer colour preferences, or to more easily identify different dimmers on the same grid plate.

Installing LEDsmart+ devices into Clipsal Saturn™ or Clipsal Saturn Zen™ wall plates

Adaptor kits are available separately to enable LEDsmart+ devices to be installed into Clipsal Saturn™ or Clipsal Saturn Zen™ wall plates. Order codes are as follows.

- DGACCESSPK2: Adaptor kit for LEDsmart+ Push Button devices
- DGACCESSPK3: Adaptor kit for LEDsmart+ Rotary dimmers

Dimmer Setup

The LEDsmart+ rotary dimmer has a number of useful functions which can easily be set up by entering setup mode and following four easy steps.

It is recommended that the MINIMUM BRIGHTNESS is always setup. The other settings are optional, depending on the dimmer application. To set the minimum brightness now, go to the next page.

Online Guide

Full details on setting all the available LEDsmart+ functions can be found at the Diginet website here

www.diginet.net.au/diginet-ledsmart-plus-dimmer-installation-information

or simply scan the QR code below with your smart device to go to this page
A: Entering Setup Mode
Before starting to setup the dimmer, the rotary dial should be removed by pulling it off the shaft. This allows the white LED indicator to be easily seen during setup.

If the dimmer has been powered up for **LESS THAN 30 MINUTES** see **A1** below.

If the dimmer has been powered up for **MORE THAN 30 MINUTES** see **A2** below.

Once in Setup Mode, options are selected by a series of ‘clicks’ of the dimmer rotary shaft. Each ‘click’ should be approximately 1 second after the previous click.

A1: Dimmer has been powered up via mains 240Vac for **LESS THAN 30 MINUTES**

**Step 1**
Press and hold the dimmer rotary shaft for 10 seconds
Note: Connected lights will dim up or down, this is normal

**Step 2**
The white LED indicators will blink ON/OFF twice per second. This indicates that the dimmer is now in Setup Mode

Note: If more than one LEDsmart+ device is connected in parallel (see pages 5-7), all these devices will now enter setup mode. The blink ON/OFF will also be seen on all other LEDsmart+ devices connected in parallel

⚠️ In the unlikely event that other LEDsmart+ devices connected in parallel do not enter setup, exit and try again.

**Step 3**
The dimmer is ready for the settings to be adjusted as required. Go to the relevant setup function instructions

A2: Dimmer has been powered up via mains 240Vac for **MORE THAN 30 MINUTES**

**Step 1**
Press and hold the dimmer rotary shaft for 30 seconds
Note: This resets the Setup Entry time back to 10 seconds (for the next 30 minutes)
Note: Connected lights will dim up or down, this is normal

**Step 2**
The white LED Indicators will blink ON/OFF twice per second. This indicates that the dimmer is now in Setup Mode

Note: If more than one LEDsmart+ device is connected in parallel (see pages 5-7), all these devices will now enter setup mode. The blink ON/OFF will also be seen on all other LEDsmart+ devices connected in parallel

⚠️ In the unlikely event that other LEDsmart+ devices connected in parallel do not enter setup, exit and try again.

**Step 3**
The dimmer is ready for the settings to be adjusted as required. Go to the relevant setup function instructions
B: Setting Minimum Brightness

The minimum brightness level provided by the dimmer can be set to suit specific lamps and/or customer requirements. For the majority of lamps a minimum level as low as 0% can be set if required. However, some lamps can become unstable at low dimming levels, in particular CFL’s.

If lamps become unstable at low dimming levels, they typically flicker or pulse on/off. The dimmer allows the minimum brightness to be set to a level above the point at which the lamp flickers/pulses.

Step 1  Enter into the dimmer Setup Mode - See PART A (page 9)

Step 2  Click the dimmer rotary shaft twice

Step 3  LED will blink 2 times

  Note: To cancel/exit do nothing for 30 seconds

  Note: If more than one dimmer is connected to the same load (see pages 5-7), all dimmers connected to this load will now blink 2 times

Step 4  Adjust dial to required MINIMUM brightness level

  Note: If more than one dimmer is connected in parallel (see pages 5-7), wait for 3 seconds for the other connected dimmer to learn the new minimum level

  Note: To cancel/exit do nothing for 30 seconds

Step 5  Click once to save & exit

  Note: If more than one LEDsmart+ device is connected in parallel, the minimum brightness levels only needs to be set in one device. The setting is automatically saved to all other devices connected in parallel

In the unlikely event that other LEDsmart+ devices connected in parallel do not enter setup, exit and try again.
Specifications

<table>
<thead>
<tr>
<th>Specification</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nominal Line Voltage Amplitude Range</td>
<td>220-240Vac</td>
</tr>
<tr>
<td>Line Voltage Frequency</td>
<td>50Hz Nominal (47 – 53Hz)</td>
</tr>
<tr>
<td>Load Brightness Control Range</td>
<td>0% to 100% (typical for LED loads)**</td>
</tr>
<tr>
<td>Rated Load</td>
<td>Refer Compatible Loads table (below)</td>
</tr>
<tr>
<td>Minimum Load</td>
<td>1W</td>
</tr>
<tr>
<td>Maximum cable distance from any LEDsmart® device to the parallel junction point</td>
<td>50m (for example, two dimmers can be separated by up to 100m provided that the maximum distance from the furthest dimmer to the parallel junction point is no more than 50m)</td>
</tr>
</tbody>
</table>

** Some LED lights do not turn off completely when used with two wire devices such as LEDsmart®. This is due to the small amount of current which flows through the device to the load when switched off. The result with some LED light sources can be a small amount of light output when the LEDsmart® is in the off position. If this occurs, it is recommended that a Diginet ‘Load by-pass’ device (Item MMBP) is added to the lights / dimmer installation.

Compatible Load Types

<table>
<thead>
<tr>
<th>Load Symbol</th>
<th>Load Types</th>
<th>Max Load</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Dimmable LED Lamps</td>
<td>400W</td>
<td>The LED driver must be dimmable. Maximum permitted number of drivers is 400W divided by the driver nameplate power rating. Due to variety of LED lamp designs, maximum number of LED lamps is also dependent on power-factor result when connected to dimmer.</td>
</tr>
<tr>
<td></td>
<td>Electronic Transformers</td>
<td>400W</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Standard iron-core transformers</td>
<td>250W</td>
<td>Due to variety of transformer designs, max LV lighting load is also dependent on transformer efficiency.</td>
</tr>
<tr>
<td></td>
<td>Toroidal iron-core transformers</td>
<td>300W</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Incandescent</td>
<td>350W</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Dimmable CFLs</td>
<td>400W</td>
<td>Due to the variety of CFL designs, the maximum number is make/model dependent.</td>
</tr>
</tbody>
</table>

Incompatible Load Types

Ceiling Sweep Fans and Exhaust fans.

Multi-Gang De-Rating

<table>
<thead>
<tr>
<th>Number of times per plate</th>
<th>De-rating factor</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>No de-rating</td>
</tr>
<tr>
<td>2</td>
<td>0.85</td>
</tr>
<tr>
<td>3</td>
<td>0.7</td>
</tr>
<tr>
<td>4</td>
<td>0.55</td>
</tr>
<tr>
<td>5</td>
<td>0.4</td>
</tr>
<tr>
<td>6</td>
<td>0.25</td>
</tr>
</tbody>
</table>

In applications where multiple dimmers are installed in a multi-gang plate, a de-rating factor is applied to the maximum load as follows.

**De-rating Example**

Two LEDsmart® devices installed in a wall plate. The maximum LED load which can be connected to each device = 400W x 0.85 = 340W per device.
